2 WHAT IS WIZ CLOUD SECURITY?

Wiz is a Cloud-Native Application Protection Platform (CNAPP) that helps organizations identify, prioritize and remediate security risks across cloud environments.

Why use Wiz ?

- Get complete visibility of your cloud assets.
- Find misconfigurations, vulnerabilities and identity risks.
- Understand how risks are connected (attack paths).
- Prioritize the most critical risks to fix first.
- Works across AWS, Azure and Google Cloud.

High Level Architecture

Key Capabilities

CSPM
Identify cloud misconfigurations

CWPP
Protect workloads (VMs, containers, K8s)

CIEM
Find and reduce identity & permission risks

Vulnerability Management
Find and prioritize vulnerabilities

IaC Security
Detect risks in Terraform, CloudFormation etc.

DSPM
Discover and protect sensitive data

ONE PLATFORM → MULTIPLE CLOUD SECURITY CAPABILITIES

3 WIZ SECURITY GRAPH

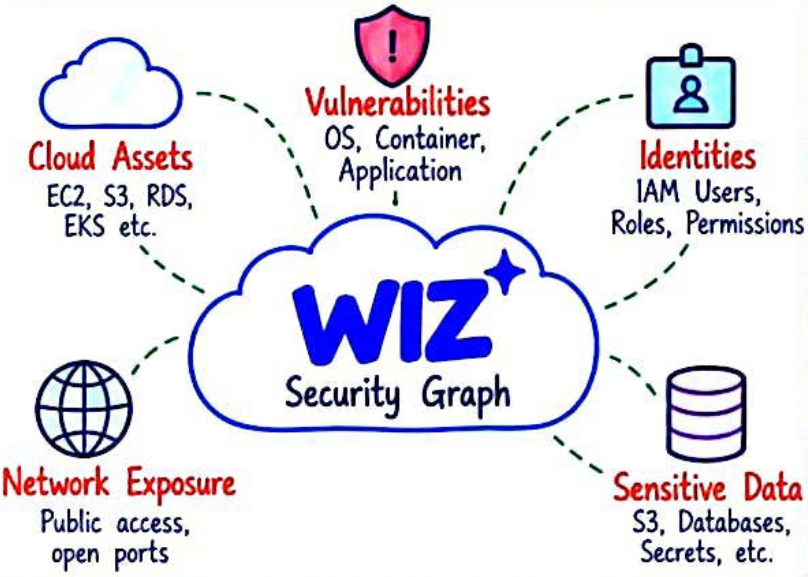

Connects the Dots to Find Real Security Risks

Wiz doesn't just find individual vulnerabilities, it connects cloud assets, identities, network exposure and sensitive data to identify potential attack paths.

Real-World Example (Attack Path)

1. **Internet-Exposed EC2 Instance**
   Publicly accessible server
2. **Exploitable Vulnerability**
   Critical vulnerability on the instance
3. **Overprivileged IAM Role**
   Instance has excessive permissions
4. **Sensitive S3 Data**
   Attacker can access confidential data

How Wiz Security Graph Works ?

Key Benefits

- Identify potential attack paths
- Understand real risk context
- Prioritize the most critical risks
- Reduce noise from false positives
- Faster and more effective remediation

Remember: It's not just about the vulnerability, but the entire attack path.

CONNECT THE DOTS → FIND REAL RISKS → PROTECT YOUR CLOUD

Interview Questions

Q1 What is Wiz?
A: Cloud-Native Application Protection Platform (CNAPP) for cloud security and risk prioritization.

Q2 Is Wiz agentless?
A: Core cloud scanning is agentless. Runtime capabilities can use sensors/agents.

Q3 What is Wiz Security Graph?
A: A graph that connects cloud assets, vulnerabilities, permissions and exposure to identify attack paths.

Q4 How does Wiz help DevOps engineers?
A: Finds and prioritizes risks in cloud resources, Kubernetes workloads, container images and IaC.

Q5 Wiz vs OPA Gatekeeper?
A: Wiz provides broad cloud security visibility and risk management. Gatekeeper enforces Kubernetes policies.

Wiz vs Other Tools

Feature	Wiz	Traditional Tools
Coverage	Cloud + Workload + Identity + Data	Usually single area
Attack Path Analysis	Yes (Security Graph)	Limited / No
Agentless	Yes (core scanning)	Many require agents
Multi-Cloud	AWS, Azure, GCP	Mostly single cloud
Risk Prioritization	Yes (business context)	Basic severity only
Ease of Use	Simple & unified platform	Multiple tools to manage
Use Case	CNAPP & full visibility	Point solutions
